

## **New: the first sun lotion that does also protect against jellyfish.**

Superb creme from Israel gives more swimming fun  
to all sunbathers.

No more fear from jellyfish. Over ten years have israeli scientists researched. Then they developed the new formula for stress less sunbathing. The active substance for this specific sun protection has been imitated according to the secretion of the motley clownfish.

It is contained in „**Sonnen+Quallenschutz Canea**“ for the first time and it is only available at pharmacies. This substance effects like a protective shield against nearly all sorts of jellyfish (not yet tested against bluebottle and box jellyfish) and it is exceptionally kind for the skin. Furthermore it prevents the development of swimming dermatitis which is caused by the vermicular grubs of trematodes.

Jellyfishes are cnidarians. All in all there are over 300 different species. If big or small, red,

yellow, white or violet – the ones are more harmless the others less. At the ends of their tentacles, the capillary arms, they have small so called cannons whose pikes are sprangled with barbs. When touched they invade the skin and release a substance that causes strong irritations und symptoms like burns.

The beautiful clownfish is coated with a natural protection film that prevents jellyfish attacks. This knowledge got israeli oceanographer Amit Lotan and his wife, molecular biologist Tamer Lotan up to the idea to develop a creme for swimming tourists out of the secretion of the clownfish. After long lasting analyses both scientists succeeded to produce a substance that has a similar protective effect. This new active substance blocks that mechanism whereby the jellyfish injects the poison into its victim's skin.

The new sun lotion is available with sun protection factor 15 and 30.

**Application:** Adults and children over 1 year of age. Coat the skin amply about 10 minutes before sunbathing or swimming. If necessary also under the swimsuit. It is recommended to put on „Quallen- und Sonnenschutz Canea“ again after longer swimming. Do apply only externally. Do not mix with other sun protection products. Avoid eye contact.

**„ Sonnen + Quallenschutz Canea“ SPF 30, 118 ml, € 16,50**

Available at pharmacies only.  
Pharmacy order numbers: 0324263 and 0324286.  
Manufacturer: Canea Pharma GmbH.
